PROFESSIONAL SUMMARY

AIML engineering student with hands-on experience building end-to-end AI systems using Computer Vision, Generative AI, RAG pipelines, and Large Language Models. Selected for the Samsung PRISM research program at Samsung R&D Bangalore. Skilled in developing production-ready prototypes using Python, PyTorch, YOLOv11, and Gradio for real-world applications in telecom, traffic optimization, and sustainability.

EDUCATION

B.E. in Artificial Intelligence and Machine Learning | CGPA: 8.05/10

Cambridge Institute of Technology, Bengaluru | Expected Graduation: May/June 2027

HSC (XII) | Percentage: 79.8%

Cambridge PU College, Bengaluru | Graduated: 2023

PROJECTS

AI-Powered UE Capability Parser – Samsung PRISM | *Samsung R&D Bangalore* | *Ongoing*

- Developed a hybrid RAG pipeline using Qwen LLM to parse complex 3GPP UE Capability logs from real device datasets.
- Implemented intelligent chunking and map-reduce techniques to automate log analysis and improve technical insight extraction.

Smart Traffic Congestion Management System (Final Year Project) | *Ongoing*

- Developing an AI + IoT system for real-time predictive traffic optimization using dynamic traffic light control.
- Built MLP neural network achieving $R^2 = 0.9725$ on 600+ days of traffic data for time-series forecasting.
- Integrated YOLO computer vision for real-time vehicle detection, speed, and density estimation from live camera feeds.
- Developing hardware prototype using Raspberry Pi Pico for intelligent traffic signal control.

Intelligent Vehicle Damage Detection System | **(Personal Project)** | *4 Weeks*

- Trained YOLOv11 model on CarDD dataset for multi-class vehicle damage detection (dents, scratches, glass damage).
- Developed a fully functional Gradio web application for real-time image upload, annotation, and damage reporting.

EcoVoice – Generative AI Audio Alerts | **(Personal Project)** | *1 Month*

- Designed a Generative AI system that converts smart meter data into personalized audio alerts (English & Kannada).
- Aligned solution with UN SDGs 7, 11, 12 & 13;
- Delivered a working prototype as StreamLit web app.

SKILLS

Programming:

Python, SQL, JavaScript, HTML, CSS

AI/ML:

Machine Learning, Deep Learning, Computer Vision, Generative AI, LLMs, RAG, Prompt Engineering, YOLOv11, Time-Series Forecasting

Frameworks & Tools:

PyTorch, Gradio, Streamlit, Git, GitHub, VS Code, Raspberry Pi Pico, JSON Processing

Core Concepts:

Data Structures, Algorithms, DBMS

CERTIFICATIONS

- Data Science for Engineers
- Data Mining
- Basics of Python
